

Almond Hull

Nutrients (dry matter)	Value
Crude protein	>4 %
WSC	>25 %
MOISTURE	Max 12 %
ASH	Max 10 %

The almond hull (mesocarp) corresponds to the outer green skin that protects the kernel. It can be used for animal feed and as biomass. The hull begins to open and dry, gradually exposing the shelled kernel as it dries, at the culmination of the ripening process.

PRESENTATION FORMAT

- Bulk or in big bags in 40" HC containers.
- Truck: 22MT Container: 20MT.

STORAGE

- 2 Years
